

# Tree Planting & Maintenance Workshop

Learn proper planting and maintenance techniques to ensure your new tree will thrive for a lifetime. Gain hands-on experience with guidance from ReLeaf Michigan's Lead Project Forester.

FREE WORKSHOP

Gain hands-on tree planting experience with ReLeaf Michigan's Lead Project Forester and Certified Arborist, Marvin Pettway. Learn how to properly plant, mulch, and water a new tree, as well as maintenance tips for ongoing survival!

The lifespan of a tree in an urban area is much less than its counterpart in the forest. While urban conditions can be harsh for a new tree, the leading cause of death for urban trees is actually improper planting. Ensure your new trees will thrive for years by gaining knowledge and experience in this hands-on workshop. Topics include tree species selection, best practices in tree planting, and ongoing tree maintenance.

This free workshop will be led by Marvin Pettway, Lead Project Forester at ReLeaf Michigan. Marvin is a Certified Arborist and retired University of Michigan Forester with extensive tree planting and maintenance experience.

All Hazel Park residents are welcome to join us for this free opportunity! This workshop is made available through the City of Hazel Park's Municipal Membership with ReLeaf Michigan, Inc.
