Describe how to find your tree (include GPS data if possible): _____

Picture of your tree: To help us verify your entry, please include a photograph of your tree with no one in front of it, a photo of your tree with you in front of it, pointing to where you measured, and either an up-close photograph or an actual sample of a twig or leaf for your tree if possible.

Please note that by submitting a picture of your tree, you are giving ReLeaf Michigan permission to use that photo on our website, social media and in future Big Tree Hunt marketing.

HOW TO MEASURE YOUR TREE

Tree Measurement (inches): _____

Measure distance around the trunk at 4 1/2 ft above ground. If the trunk splits below 4 1/2 ft, measure at the narrowest point between the split and the ground.

Measure your tree's trunk by wrapping a piece of string around the trunk and marking where the string meets itself. Then, lay your string flat on the floor and measure the length between the marks.

If your tree trunk splits before the 4 1/2 ft measurement point, there are different ways to appropriately make your measurement. See the four additional options below to best determine which scenario fits your tree.

A. 4 1/2 ft.

A. Measure circumference 4 1/2 ft. above ground.

C. 4 1/2 ft.

C. In the case of a tree clump measure the circumference of the largest stem 4 1/2 ft. above ground.

B. 4 1/2 ft.

B. If tree originates as a single trunk but splits below 4 1/2 ft. measure at the narrowest point between the split and the ground.

D. 4 1/2 ft.

D. If tree is on a slope, measure twice, high side & low side, 4 1/2 ft. on both sides. Add measurements together, divide by two.
