

# Healthy Trees in the Home Landscape

Learn to select the right species, right location and right purpose when planting a tree to ensure it will thrive for a lifetime.

*Presented with Keep Plymouth Leafy, in cooperation with the Plymouth District Library*

“Location, Location, Location” is the mantra when buying a house. When planting a tree, it is “Right Tree, Right Place, Right Purpose.”

Choosing the correct trees and shrubs is key. This class lists good and bad trees, and why you should choose one tree over another. It also explains micro-climate environmental conditions. Finally, it will discuss oak wilt, a devastating disease to oak trees. Learn how to recognize it and what you can do to help prevent it.

This free webinar will be led by Gary Eichen, the Plant Health Care and Lawn Manager at SavATree in Troy. Mr. Eichen is a Certified Arborist with over 30 years of experience in Plant Health Care and Lawn Care.

All are welcome.

Please join us for this free opportunity!
